Dear OEHHA Members,

Please do not allow any Glyphosate in California. I strongly urge that the Prop 65 NSRL (No Significant Risk Level) for glyphosate be set at ZERO to protect the citizens of California. I have read many articles in the last three decades that convince me that Glyphosate is a terrible toxin in the environment that is in many of the crops that are sent to market for humans. It is causing major health problems for people, especially children. Please help stop the use of this terrible poison ASAP.

Sincerely,

Louisa Aronow
